VoltEdge Power System

RELIABLE PANEL MANUFACTURING AND SERVICES

About Us

At VoltEdge Power System, we are committed to delivering high-quality electrical panel manufacturing solutions that power industries with precision, safety, and reliability. Established with a vision to bring innovation and excellence into the electrical infrastructure space, we specialise in designing and manufacturing a wide range of control panels tailored to meet diverse industrial requirements.

With a strong foundation built on engineering expertise and industry knowledge, we focus on providing customised panel solutions that align with client-specific operational needs. From low voltage to medium voltage applications, our panels are engineered to ensure efficient power distribution, system protection, and seamless performance across various sectors.

Our manufacturing process is driven by strict quality standards, advanced technology, and attention to detail. Every panel we produce undergoes rigorous testing to ensure durability, safety, and compliance with industry norms. We believe that quality is not just a feature but a commitment we deliver in every project.

At VoltEdge Power System, we understand that every industry operates differently. That's why we take a client-centric approach, working closely with our customers to understand their challenges and provide reliable, scalable, and cost-effective solutions. Whether it is industrial plants, commercial establishments, or infrastructure projects, we strive to be a trusted partner in powering growth.

Our team consists of dedicated professionals who bring passion, technical expertise, and innovation into every project. We continuously evolve by adopting modern technologies and best practices to stay ahead in a competitive market.

~ CEO and Managing Director

PREETI K

Our Products:

- PCC Panels
- APFC Panels
- AMF Panels
- MCC Panels
- VFD Panels
- Busduct Systems
- 3 Phase Metering Panels
- Synchronising Panel

Our Services:

- Panel Design & Engineering
- Panel Design & Engineering
- Installation & Commissioning
- Annual Maintenance Contracts (AMC)
- Troubleshooting & Repairs
- Panel Upgradation & Retrofit
- Energy Efficiency Solutions
- On-site Support
- All ACB and MCCB Schindler and ABB testing

Our Mission

To deliver high-performance electrical panel solutions that ensure safety, efficiency, and long-term reliability while exceeding customer expectations.

Our Vision

To become a trusted and leading name in the electrical panel manufacturing industry by consistently providing innovative and quality-driven solutions.

Our Core Values

- Quality & Precision
- Customer Commitment
- Innovation & Growth
- Integrity & Transparency
- Safety First

PCC PANELS

Power Control Centre (PCC) Panels are the heart of any electrical distribution system, designed to efficiently manage and control the power supply from the main source to various downstream equipment. At Voltedge Power System, our PCC panels are engineered with precision to ensure safe, reliable, and uninterrupted power distribution across industrial and commercial applications.

Parameter	Specification
Rated Voltage	Up to 415V / 690V AC
Rated Frequency	50 Hz / 60 Hz
Rated Current	Up to 6300 A
Short Circuit Withstand Capacity	Up to 50kA for 1 sec
Busbar Material	Copper / Aluminium
Busbar Insulation	Heat shrink / Epoxy coated
Ingress Protection (IP)	IP42 / IP54 / IP65
Panel Type	Floor-mounted / Free-standing
Design Type	Modular / Fixed / Draw-out
Enclosure Material	CRCA Steel
Sheet Thickness	1.6 mm – 2.5 mm
Surface Finish	Powder-coated
Color	RAL 7035 / Customizable
Incoming/Outgoing Feeders	ACB / MCCB / SFU
Metering	Digital / Analog
Protection Devices	MCB / MCCB / Relays
Control Wiring	FRLS Copper
Cable Entry	Top / Bottom
Standards	IEC / IS
Earthing	Provided
Interlocking	Mechanical / Electrical

APFC PANELS

Automatic Power Factor Control (APFC) Panels are designed to improve the power factor of an electrical system by automatically regulating reactive power. They help in maintaining an optimal power factor level, reducing energy losses, and avoiding penalties imposed by utility providers. At Voltedge Power System, our APFC panels are engineered to deliver efficient and reliable performance by continuously monitoring the load conditions and switching capacitor banks accordingly. This ensures consistent power quality, improved system efficiency, and enhanced equipment life.

Parameter	Specification
Rated Voltage	Up to 415V AC
Rated Frequency	50 Hz
Power Factor Correction	Up to 0.99
Capacitor Type	Heavy-duty / Detuned
Switching Type	Contactor / Thyristor
APFC Relay	Microprocessor-based
No. of Steps	6 / 8 / 12 (as required)
Detuning Reactor	5.67% / 7% (optional)
Busbar Material	Copper / Aluminium
Protection Devices	MCCB / HRC Fuses
Metering	Digital Multifunction Meter
Ingress Protection (IP)	IP42 / IP54
Enclosure Material	CRCA Steel
Cooling	Natural / Forced
Standards	IEC / IS

AMF PANELS

Automatic Mains Failure (AMF) Panels are designed to ensure uninterrupted power supply by automatically switching between the main power source and a backup generator during power failures. These panels play a critical role in maintaining continuous operations in industries and commercial facilities where power interruptions can lead to significant losses.

At Voltedge Power System, our AMF panels are built with advanced control logic to detect power failure instantly and initiate generator start-up, followed by seamless load transfer. Once the main supply is restored, the system automatically switches back and safely shuts down the generator, ensuring efficiency and protection.

Parameter	Specification
Rated Voltage	Up to 415V AC
Rated Frequency	50 Hz
Control Type	Automatic / Manual
Switching Device	Contactor / Motorized Changeover
Controller	Microprocessor / PLC-based
Phase Monitoring	Under/Over Voltage, Phase Failure
Generator Control	Auto Start / Stop
Interlocking	Electrical & Mechanical
Protection Devices	MCB / MCCB
Metering	Digital Voltmeter / Ammeter
Enclosure Material	CRCA Steel
Ingress Protection (IP)	IP42 / IP54
Cooling	Natural Ventilation
Standards	IEC / IS

MCC PANELS

Motor Control Centre (MCC) Panels are designed to control, monitor, and protect electric motors used in industrial and commercial applications. They serve as a centralized system for managing multiple motors, ensuring smooth operation, safety, and efficiency.

At Voltedge Power System, our MCC panels are engineered to provide reliable motor control with advanced protection features. These panels facilitate efficient starting, stopping, and regulation of motors while safeguarding them against faults such as overloads, short circuits, and phase failures.

Parameter	Specification
Rated Voltage	Up to 415V AC
Rated Frequency	50 Hz
Rated Current	As per motor load
Motor Starting Method	DOL / Star-Delta / Soft Starter
Switching Device	MCCB / Contactor
Protection Devices	Overload Relay / MCB / MCCB
Control Type	Manual / Automatic
Metering	Digital / Analog
Busbar Material	Copper / Aluminium
Ingress Protection (IP)	IP42 / IP54
Enclosure Material	CRCA Steel
Cooling	Natural / Forced
Standards	IEC / IS

VFD PANELS

Variable Frequency Drive (VFD) Panels are designed to control the speed and torque of electric motors by varying the input frequency and voltage. They play a crucial role in improving energy efficiency, reducing mechanical stress, and enhancing process control in industrial applications.

At Voltedge Power System, our VFD panels are engineered to provide precise motor control, smooth acceleration, and reduced energy consumption. By optimizing motor performance based on load requirements, these panels help in minimizing power losses and extending equipment life.

Parameter	Specification
Rated Voltage	Up to 415V AC
Rated Frequency	50 Hz
Output Frequency Range	0 – 50/60 Hz (or higher)
Power Range	As per motor requirement
Control Method	V/F Control / Vector Control
Drive Type	AC Drive
Protection Features	Overload / Overvoltage / Short Circuit
Cooling	Air Cooled / Forced Ventilation
Enclosure Material	CRCA Steel
Ingress Protection (IP)	IP42 / IP54
Interface	Keypad / HMI (optional)
Communication	Modbus / RS485 (optional)
Standards	IEC / IS

BUSDUCT SYSTEMS

Busduct Systems (Busbar Trunking Systems) are used for efficient and reliable power distribution in industrial and commercial facilities. They serve as an alternative to conventional cabling, offering a compact, safe, and flexible solution for transmitting high currents over short and long distances.

At Voltedge Power System, our busduct systems are designed to ensure low power loss, high conductivity, and enhanced safety. With modular construction and robust design, they allow easy installation, expansion, and maintenance, making them ideal for modern power distribution requirements.

Parameter	Specification
Rated Voltage	Up to 415V / 690V AC
Rated Frequency	50 Hz
Rated Current	Up to 6300 A
Conductor Material	Copper / Aluminium
Insulation Type	Air Insulated / Sandwich Type
Ingress Protection (IP)	IP42 / IP54 / IP65
Short Circuit Rating	Up to 50kA
Enclosure Material	Aluminium / CRCA Steel
Mounting	Horizontal / Vertical
Jointing	Bolted Type
Tap-off Provision	Available
Cooling	Natural Air Cooled
Standards	IEC / IS

3 Phase Metering Panel

A Three Phase Metering Panel is an electrical distribution panel designed to measure and monitor electrical parameters in a three-phase power system. It is used to accurately record energy consumption (kWh), voltage, current, power factor, and other electrical parameters for industrial, commercial, and utility applications. These panels ensure proper energy management, billing accuracy, and load monitoring in three-phase electrical networks.

Parameter	Specification
System Type	3 Phase, 3 Wire / 4 Wire
Rated Voltage	415 V AC
Frequency	50 Hz
Current Rating	Based on CT (typically 50A to 3000A primary)
Meter Type	Electronic Energy Meter (DLMS optional)
Accuracy Class	Class 0.5S / 1.0
CT Ratio	As per load requirement (e.g., 100/5A, 200/5A)
Enclosure Type	Wall Mounted / Floor Mounted
Protection Level	IP42 / IP54
Material	CRCA Steel, Powder Coated
Measured Parameters	kWh, kVAh, Voltage, Current, Power Factor
Standards	IS 13779 / IEC 62053

Synchronizing Panel

A Synchronizing Panel is an electrical control panel used to connect two or more power sources (such as generators and grid supply) to a common busbar by matching their electrical parameters. It ensures safe and seamless power transfer by synchronizing voltage, frequency, phase sequence, and phase angle before paralleling the sources. These panels are widely used in industries, hospitals, data centers, and large commercial installations to ensure uninterrupted power supply.

Parameter	Specification
System Type	3 Phase, 3 Wire / 4 Wire
Rated Voltage	415 V AC / 11 kV (as required)
Frequency	50 Hz
Power Sources	DG Sets / Grid / Multiple Generators
Synchronization Method	Automatic / Manual / Semi-Automatic
Synchronization Parameters	Voltage, Frequency, Phase Angle
Control System	Microprocessor / PLC Based Controller
Metering	Multifunction Meter (V, A, kW, kVA, PF, Hz)
Breakers	MCCB / ACB (Motorized)
Protection Features	Over/Under Voltage, Over/Under Frequency,
Communication (Optional)	RS485 / Modbus / SCADA Integration
Enclosure Type	Floor Mounted, Indoor Type
Material	CRCA Steel, Powder Coated
IP Protection	IP42 / IP54
Standards	IEC 61439 / IS Standards

At Voltedge Power System, we are committed to delivering reliable, efficient, and high-performance electrical panel solutions that empower industries with uninterrupted power and complete control. Our expertise lies in designing and manufacturing panels that meet the highest standards of safety, durability, and engineering excellence.

We focus on understanding the unique requirements of every client and providing customized solutions that ensure optimal performance and long-term value. From design to manufacturing and testing, every stage is executed with precision and strict quality control.

Bengaluru-Pune-Mumbai

Our goal is to build trust through quality and innovation. Every panel we manufacture reflects our dedication, technical expertise, and attention to detail. As we grow, we continue to embrace new technologies and improve our capabilities to serve our clients better.

We sincerely thank our customers and partners for their trust and support. Together, we aim to power a stronger and more efficient future.
